

Civic Science USA: Engaging Students in Community

CELF's Civic Science program nurtures STEAM skills, encouraging students to develop place-based inquiries for hands-on learning about local sustainability and environmental justice.

Taking action together

Our program promotes cross-curricular integration, empowering educators to guide students as environmental health researchers, and identifying pollution sources and sustainability issues. Through research-based learning, students take action for healthier communities.

Program Activities

- Join our virtual program launch on October 12th.
- Be eligible for funding for field trips, research tools, and a completion stipend.
- Enjoy year-round support: virtual sessions on data analysis, and digital storytelling, 1-on-1 coaching, field events in local green spaces, and collaborative planning with peers.
- Access a treasure trove of digital resources to support pathways of study.
- Show off your students' work at CELF's Spring 2024 Student Symposiums, engaging with local stakeholders and decision-makers.
- Ignite civic action in your community!
